Ordnance Maintenance Officer
6th Marine Regiment, Camp Lejeune N.C.

"These particular wipes contain lubrication and cleaning solution that is ideal for desert environments. They are cost effective because our units will not have to embark/carry rages for CLP. They are manufactured with the same concept of baby wipes but for weapons, and are fantastic."

This is just a sampling of the hundreds of letters from the troops and dozens of others on the excellent performance of the Hilco Lube Products.

Georgia National Guard

"…As Infantry Soldiers in a Combat Zone we use our weapons more than most and have found your "Hilco Lube – Lubricant/ Cleaner wipes to be invaluable. One of my soldiers brought a can of them over and cannot get any more…"

Hill responded by DONATING hundreds of Hilco Lube Weapon Wipes to the National Guard

2LT, IN, USAR (R)
Human Resources Professional
Safety Expert

"A Hilco Lube guy wants to send a care package, and not the usual baby wipe crap. When I went to OIF, we were able to get these lubricated wipes (they came in an industrial jar) but they were HOT for cleaning... SSG Davis would have been proud…Trust me, they work great. You can cut the cleaning time for your M4 from 12 hours (like at Benning) to about 30 minutes (and it will look better)."

SPEC Infantry Gunner
National Guard
Florence, SC

"Back in August one of our teams gave us some Hilco Lube wipes and I was skeptical…having used gun wipes before…I fell in love with your wipes, they are great... You came up with a wipe that is good to use on military weapons and hunting rifles. It even got the highway gum off my Harley... I can use them here in Afghanistan, at home hunting, and on my bike...I get a nice light coat that cleans and preserves…I want to tell you after a fire fight I got the carbon off my 240b so easy! I didn't have burnt carbon or gum like when I use CLP and a rag."

#3884 HILCO LUBE WIPES

Team NCOIC
3-7-2 INP NPTT

"I am serving in Iraq on a National Police Transition Team (NPTT), and used one of your products to help clean and lubricate our weapons. During my 23 years as a law enforcement officer, and 26 years Army reserve, I have never found anything that cleans, lubricates, and keeps away dust like this product. My Commander and the entire team are screaming for more (we only had one can). We use five different weapon systems, and it works wonders on all of them."

#3884 HILCO LUBE WIPES

Used by our USA brave troops overseas, MACDILL Air Force Base, Pinellas Park Police, St. Petersburg Police, BLACKWATER Personnel, DEA, and Fulton County Police all LOVE HILL'S GUN WIPES!

- **Does not pick up SAND or dust**
- **Great for all parts of guns**
- **Prevents Flash Rusting**
- **Displaces Moisture**
- **One Step Process**
- **Lab Tested as best for Lead Removal** ***(see next panel)***

#3884 HILCO LUBE WIPES

The following laboratory report shows Comparative Ability of Wipes to remove Lead Residue from Weapons conducted by **ANALYTICAL SERVICES, INC.,** Norcross, GA 30092.

"This is how well Our Hilco Lube Weapon wipes outdid CLP-2. Hill…took off 81 millimeters of lead compared to CLP removing only 3.6. This independent lab test was done with material supplied by a Marine general at Camp Lejeune."

(a complete copy of laboratory report available upon request)

A report done in Nov. 2003 by WABC News reporter, Jim Hoffer showed that weapon lube issued by army may be costing lives in Iraq.
A 4 month investigation showed that a lube supplied by the military called CLP may actually be causing guns to jam. Jessica Lynch was quoted as saying, "When we were told to lock and load that's when my weapon jammed."
Eyewitness News obtained a copy of a general's "lessons learned" report which details weapons performance in Iraq. The report says soldiers repeatedly stated that CLP was not a good choice for weapons maintenance, claiming it "attracted sand to the weapon." We heard similar complaints about the CLP from some New Jersey Marine reservists just back from Iraq. Corporal Steve Gentle, Montclair, NJ said "I used it as little as possible." He was asked "Why?" "Because the CLP attracted the sand. It made sand stick to the weapon and clog up, causing the weapon to jam!"
